✶ Claude

ABOUT ME

Full Stack Engineer with **6+** years of experience across freelance and product environments, building scalable web applications using Node.js, Express.js, React.js with additional experience in Python/Django, MySQL, and GCP. Experienced in developing REST APIs, database-driven systems, large-dataset search features, backend optimization, and cloud-based application deployment. Passionate about building reliable, high-performance systems that scale.

SKILLS

Backend

Node.js - Express.js - Python - Django - PHP

Frontend

React.js - JavaScript - HTML/CSS

Databases

MySQL - MongoDB

Cloud & DevOps

GCP - AWS - Docker - Git

Others

RESTful APIs - System Design (HLD & LLD) - DSA - AI Tools (Claude AI)

PROFESSIONAL EXPERIENCE

Software Engineer I

[1.5 Year]

NOV 2024 - PRESENT

- Led backend-focused development across multiple web applications and data-driven platforms.
- Designed and maintained scalable REST APIs using **Node.js**, Express.js, PHP and **Python/Django**.
- Built **React.js**-based features and contributed to full stack application development.
- Reduced query response time by ~35% through MySQL schema redesign, targeted indexing, and query optimization.
- Leveraged Claude AI to accelerate development workflows including code review assistance, API design, and debugging — improving team productivity.
- Implemented search, filtering, and admin workflows for large datasets and business use cases.
- Contributed to cloud deployment on **GCP**, code reviews, version control, and scalable development practices.

Software Engineer - Intern

[6 Months]

MAY 2024 - NOV 2024

- Joined as Backend Intern after completing **full-stack training**, transitioning from **freelance** development to a full-time product engineering role.
- Contributed to the backend of Terrogece Codex project, initially assisting in feature development and bug fixes.
- Worked on real-time, database-driven web applications using Node.js, Python, PHP, JavaScript, and MySQL.
- Learned Git version control and applied best practices.

Freelance Full-stack Developer (Contract-based)

[4.4 Years]

FEB 2019 - JUN 2023

- Worked on small to mid-scale web tasks assigned through third-party developers, referrals, and professional contacts.
- Contributed to both frontend and backend development based on project needs, mainly using Node.js, Express.js, React.js, Python, Laravel, and basic Django.
- Assisted in building and updating REST APIs, fixing bugs, and implementing small features in existing applications.
- Performed basic database operations in MySQL, including simple queries, minor optimizations, and schema updates.

CERTIFICATIONS & TRAINING

Full Stack Development Training - Upskilling

[6 Months]

JUL 2023 - JAN 2024

- Covered frontend (React.js) and backend (Node.js, RESTful APIs, databases) to strengthen full-stack development fundamentals. [Click here](#) for certificate.

PROJECTS

Terrogece Codex

Professional Project at Bitpastel Solution Pvt. Ltd.

- Led backend development for a large-scale intelligence and research platform built on PHP (CodeIgniter), JavaScript, **MySQL**, and **GCP**. Worked on scalable REST APIs, high-volume data handling, advanced search and filtering, metadata-driven records, media/document management, and performance optimization for search-heavy workflows. Improved database schema design, indexing, and query efficiency to support fast retrieval across large datasets and analyst-facing application features.

E-commerce Platform

Full Stack

- Built a full stack eCommerce web application for multi-vendor product selling and buying, using Node.js, Express.js, React.js, and MongoDB. Developed REST APIs for seller registration, product management, cart, orders, **JWT** authentication, and buyer workflows, along with admin-side inventory and order management features. Integrated **Stripe** demo payments and deployed the application using Netlify and Firebase with source code managed on GitHub.

Social Media

Platform Full Stack

- Built a full stack social media web application inspired by Twitter/X using Node.js, Express.js, React.js, and MongoDB. Developed REST APIs for authentication, used **JWT** for login authentication, post creation, feed generation, user profiles, likes, comments, follow/unfollow, and content interaction workflows. Designed MongoDB schemas and optimized queries to support scalable content storage, high-read feed operations, and responsive user activity handling.

EDUCATION

Bengal College Of Engineering & Technology

B.Tech (ECE) | DGPA - 7.54

2014 - 2018

Durgapur, West Bengal
