ABOUT ME

< **Full Stack Engineer** with **6+** years of experience across freelance and product environments, building scalable web applications using Node.js, Express.js, React.js with additional experience in Python/Django, MySQL, and GCP. Experienced in developing REST APIs, database-driven systems, large-dataset search features, backend optimization, and cloud-based application deployment. />

SKILLS

Node.js/Express.js • Python/Django • React.js • PHP • MySQL • GCP • RESTful APIs • Git & Deployment • DSA • LLMs

- ➔ Hands-on experience in designing scalable backend systems, APIs, and cloud-based architectures with a strong foundation in system design HLD & LLD principles.
- ➔ Focused on delivering practical, scalable, and high-impact engineering solutions.

PROFESSIONAL EXPERIENCE

Software Engineer I

[1.5 Year]

NOV 2024 – PRESENT

- Led backend-focused development across multiple web applications and data-driven platforms.
- Designed and maintained scalable REST APIs using **Node.js**, Express.js, PHP and **Python/Django**.
- Built **React.js**-based features and contributed to full stack application development.
- Worked on **MySQL** database design, query optimization, and indexing for performance improvement.
- Implemented search, filtering, and admin workflows for large datasets and business use cases.
- Contributed to cloud deployment on **GCP**, code reviews, version control, and scalable development practices.

Software Engineer – Intern

[6 Months]

MAY 2024 – NOV 2024

- Joined as Backend Intern after completing **full-stack training**, transitioning from **freelance** development to a full-time product engineering role.
- Contributed to the backend of Terrogece Codex project, initially assisting in feature development and bug fixes.
- Worked on real-time, database-driven web applications using Node.js, Python, PHP, JavaScript, and MySQL.
- Learned Git version control and applied best practices.

Full Stack Development Training – Upskilling

[6 Months]

JUL 2023 – JAN 2024

- Covered frontend (React.js) and backend (Node.js, RESTful APIs, databases) to strengthen full-stack development fundamentals. [Click here](#) for certificate.

Freelance Full-stack Developer (Contract-based)

[4.4 Years]

FEB 2019 – JUN 2023

- Worked on small to mid-scale web tasks assigned through third-party developers, referrals, and professional contacts.
- Contributed to both frontend and backend development based on project needs, mainly using Node.js, Express.js, React.js, Python, Laravel, and basic Django.
- Assisted in building and updating REST APIs, fixing bugs, and implementing small features in existing applications.
- Performed basic database operations in MySQL, including simple queries, minor optimizations, and schema updates.
- Integrated third-party APIs and handled basic data validation and authentication (login/signup flows, token handling).
- Supported deployment and setup tasks with guidance, using AWS and Docker for running applications.
- Worked under guidance of senior/lead developers and followed predefined requirements and timelines.
- Delivered assigned modules and fixes on time, focusing on stability and functionality.
- Gained hands-on experience by working on different types of small tasks, improving problem-solving skills.
- Payments and communication were handled through third-party developers, not directly with clients.

PROJECTS

Terrogece Codex

Professional Project at Bitpastel Solution Pvt. Ltd.

- Led backend development for a large-scale intelligence and research platform built on PHP (CodeIgniter), JavaScript, **MySQL**, and **GCP**. Worked on scalable REST APIs, high-volume data handling, advanced search and filtering, metadata-driven records, media/document management, and performance optimization for search-heavy workflows. Improved database schema design, indexing, and query efficiency to support fast retrieval across large datasets and analyst-facing application features.

E-commerce Platform Full Stack

- Built a full stack eCommerce web application for multi-vendor product selling and buying, using Node.js, Express.js, React.js, and MongoDB. Developed REST APIs for seller registration, product management, cart, orders, **JWT** authentication, and buyer workflows, along with admin-side inventory and order management features. Integrated **Stripe** demo payments and deployed the application using Netlify and Firebase with source code managed on GitHub.

Social Media Platform Full Stack

- Built a full stack social media web application inspired by Twitter/X using Node.js, Express.js, React.js, and MongoDB. Developed REST APIs for authentication, used **JWT** for login authentication, post creation, feed generation, user profiles, likes, comments, follow/unfollow, and content interaction workflows. Designed MongoDB schemas and optimized queries to support scalable content storage, high-read feed operations, and responsive user activity handling.

EDUCATION

Bengal College Of Engineering & Technology

B.Tech (ECE) | DGPA – 7.54

2014 – 2018

Durgapur, West Bengal
